Project Research Approach

Policy Research Approach

- Develop goals of policy analysis
- Develop list of policy options
 - Based on EPRI Solutions research, team experience
- Group policies into ‘portfolios’
- Qualitative / Quantitative analysis
 - EEA economic potential analysis
 - E3 stakeholder analysis - looking for ‘win-win’
- Develop conclusions and R&D research

Desirable Attributes of Policy Options

- Meet stakeholder goals such as:
 - Higher efficiency use of the State's energy resources
 - Positive environmental impact
 - Low impact on utility rates and minimal cost-shifting
- Promote best projects (as defined by stakeholders goals)
- Be relatively easy to implement
- Require low incentive payments
- Have a realistic exit strategy

Develop List of Policy Options

| | SGIP Modifications | Resource Adequacy | IOU Incentives | Rate Design Changes |
|--|--|--|--|---|
| | Unbundle SGIP Incentives Increase SGIP Incentives Renewable CHP Bonus Faster application processing Application preparation assistance | Count toward resource adequacy targets Favorable crediting of CHP capacity Favorable crediting for RPS | CHP shareholder incentives ERAM for CHP CHP program funding Utility ownership Market-based bill credit | Net metering w/ and w/o discount Volumetric Rate Eliminate exit fees Rolled-in interconnection |
| Promote high value CHP (state goal) | X | | | |
| Reduce capital cost | X X X | | | X X |
| Increase operating benefits | | | - | X X |
| Reduce hassle (siting/permitting) | X X | | X | |
| Education (technical knowledge/experience) | X | | X | |
| Resource adequacy value | | X X | | |
| Reduce risk/project uncertainty | | | | |
| RPS value | | X | | |
| Utility shareholder incentives | | | X X X X | |
| Lessen utility disincentives | | | X X X X | |

Appendix H of the report contains descriptions of all of the policy ideas developed.

Develop List of Policy Options, cont.

| | Marketing and Branding | | | | | | State Tax | | Other Actions | | | | | R&D | Portfolio Stds | |
|--|------------------------------|-------------------------|-------------------|--------------------|--------------------|--------------------|------------------------------|------------|--------------------------|------------------------|-------------------------|--------------------|-------------------------------------|------------------|----------------|-------------------------|
| | Coordinated education effort | Qualified provider list | Certified vendors | Low cost financing | CHP utility audits | Targeted marketing | Information sharing protocol | Tax Credit | Tax credit for suppliers | Streamlined permitting | Subsidized CHP training | CHP infrastructure | Overcome landlord tenant disconnect | Subsidized fuels | R&D Funding | CHP Portfolio Standards |
| Promote high value CHP (state goal) | | | | X | | X | | X | X | | | | X | | | |
| Reduce capital cost | | | | | | | | X | X | | | | | | X | |
| Increase operating benefits | | | | X | | | | | | | | | | X | X | |
| Reduce hassle (siting/permitting) | | X | X | X | X | | X | | | X | X | X | X | | X | |
| Education (technical knowledge/experience) | X | X | X | | X | X | | | | | | | X | | | X |
| Resource adequacy value | | | | | | | | | | | | | | | | X |
| Reduce risk/project uncertainty | | | X | X | | | | X | | | | | | | | |
| RPS value | | | | | | | | | | | | | | | | |
| Utility shareholder incentives | | | | | | | | | | | | | | | | |
| Lessen utility disincentives | | | | | | | | | X | | | | | | | X |

Policy Portfolio Approach

- Package multiple policies together to attain the widest stakeholder support for CHP/CCHP installations
- Identify 'core' policies and suggested additional 'supplemental' policies to support implementation of core policies

9 Policy Portfolios Examined

1. **Base Case** (no change in existing policy)
2. **No Incentives** (removal of all existing incentives)
3. **Moderate Market Access** (improved access to wholesale energy markets)
4. **Aggressive Market Access** (improved access to wholesale energy markets, and provide mechanism to include CHP for Generation and T&D capacity)
5. **Increasing Incentives** (expanded SGIP and a production tax credit)
6. **Streamlining CHP Installations** (improved customer outreach, simplify permits and interconnection)
7. **Increased R&D Funding** (keep existing policy and focus on technology development)
8. **High Deployment** (Increased R&D Funding + Aggressive Market Access)
9. **Portfolio Standards** (set a target penetration level and adjust incentives, or conduct bidding for payments, until the target is reached)

Quantitative and Qualitative Policy Analyses

- Conducted 2 quantitative analyses
 - Evaluated the penetration of CHP installations of different types under the policy portfolios 1 through 8
 - Evaluated the costs and benefits of an individual CHP installation under a policy portfolio, and summarized the levelized costs and benefits from the CHP owner, utility, and societal perspectives
- Conducted 2 qualitative analyses
 - Stakeholder assessment of several key industry stakeholders
 - Evaluated Portfolio Standard policies

Net Benefits for Each Policy Scenario

CHP Benefits, Costs, Penetration & CO₂ Impact by Portfolio

| Portfolio | NPV through 2020 (in millions) | | | | | | |
|----------------------|--------------------------------|---|-----------------------------------|---------------------|------------------|-----------|--------------------------------------|
| | Total CHP Owner savings | Total utility operating margin lost | Total Societal Net Benefits | Total Incentives | Cumulative MW | Total GWh | Total CO2 saved (million tons) |
| Base Case | \$ 451 | \$ (759) | \$ 620 | \$ 53 | 1,966 | 118,031 | 25 |
| No Incentives | \$ 54 | \$ (183) | \$ 306 | \$ - | 1,141 | 60,140 | 14 |
| Streamlining | \$ 571 | \$ (1,005) | \$ 734 | \$ 71 | 2,489 | 149,832 | 32 |
| Hi R&D | \$ 899 | \$ (1,485) | \$ 1,255 | \$ 209 | 2,764 | 193,635 | 41 |
| Increased Incentives | \$ 1,285 | \$ (1,183) | \$ 201 | \$ 1,127 | 2,942 | 200,579 | 40 |
| Moderate Market | \$ 1,049 | \$ (720) | \$ 3,286 | \$ 53 | 4,377 | 361,260 | 72 |
| Aggressive Market | \$ 1,317 | \$ (884) | \$ 4,791 | \$ 555 | 5,348 | 436,364 | 83 |
| High Deployment | \$ 3,067 | \$ (2,387) | \$ 7,516 | \$ 1,063 | 7,340 | 597,489 | 120 |

Perspectives of CHP Key Market Stakeholders in Policy Analysis

| <u>Customer/ CHP Owner</u> | <u>Utility/ Non- Participants</u> | <u>State/ Society</u> | <u>Small User Advocate</u> | <u>Ratepayer Advocate</u> |
|---|---|--|---|---|
| The customer's primary concern is to reduce electricity costs and maintain reliability. | The utility's primary concern is to achieve earnings targets and avoid rate increases associated with behind-the-meter CHP installations. | The society is concerned with the least cost solution with the least environmental impact. | The small user advocate is concerned with rate impacts on the small customers of California's utilities. (Similar to the positions of TURN and UCAN.) | The ratepayer advocate is concerned with keeping electric rates fair and low and promoting customer choice in energy decisions. (Similar to the position of ORA.) |

Stakeholder Perspective Analysis by Portfolio

| Moderate Market Access Portfolio | Participants | Utility | State | Small-User Advocate | Ratepayer Advocate |

| Existing Policies | | | | | |
| Maintain SGIP Incentives | | | | | |
| Maintain CHP qualification for UEG Gas Tariff | | | | | |
| Core Policies | | | | | |
| Statewide CHP portfolio standards | Y | N | M | -- | M |

Portfolio Standard Pros & Cons

- Approach: Set a target level of penetration and let the incentive vary to reach the goals
- Pros:
 - Prevents an incentive level that overpays CHP installations by creating a competitive bid for payments
- Cons:
 - Developing the competitive mechanism is difficult
 - e.g. Who is responsible for reaching the target?
 - Requires specification of the 'right' amount of CHP – a difficult task – especially given volatile natural gas prices
 - Portfolio Standard is an incentive-focused policy and does not focus on payments to CHP for the value it provides the system

Exit Strategy for 'Subsidies'

The results of the stakeholder analysis will likely yield two types of policy options from which a comprehensive CHP strategy can be developed.

Policy Analysis Conclusions (1)

- Export at wholesale energy prices could encourage new very large CHP installations.
 - Significant production at higher efficiency than central station plants.
- All policy options result in losses in electric utility revenue greater savings to the utility.
 - Participation in energy and capacity markets, as well as T&D capacity, tends to mitigate the utility losses.

Policy Analysis Conclusions (2)

- Increasing incentives to encourage more CHP adoption alone decreases the societal benefits from CHP installations and exacerbates the losses to the utility and non-participating customers.

Take-away Recommendations

- Support policies that encourage operation of CHP to capture both customer- and utility-system side benefits
- Pay for utility-system services based on the value they provide
- Define an exit strategy that ramps down ‘subsidies’ over time as technology costs improve
